Preface

We are pleased to share with you the IMD World Competitiveness Yearbook 2023. Now in its 35th edition, the IMD World Competitiveness Yearbook continues to serve as a beacon for governments, businesses, and individuals seeking to navigate the complex terrain of global competitiveness. Our annual assessment sheds light on the key factors that drive and shape competitiveness, providing valuable insights and benchmarks for decision-makers worldwide.

The year 2022 marked a pivotal moment in history, as nations and economies were still grappling with the profound impacts of the COVID-19 pandemic when Russia invaded Ukraine. These crises exposed vulnerabilities and disrupted established norms, forcing us to reevaluate our approaches to economic growth and resilience. As we try to emerge from this challenging period, the need for a clear understanding of competitiveness has intensified because the importance of governments and policies has grown accordingly.

It is crucial to acknowledge the growing uncertainty, inflationary pressures, and geopolitical conflicts that have emerged as significant challenges in the global landscape of competitiveness. The post-pandemic realignment has brought about unprecedented disruptions to supply chains, amplified economic volatility, and heightened geopolitical tensions, all of which have far-reaching implications for nations striving to enhance their competitiveness.

Moreover, the specter of inflation looms large, as the global economy seeks to strike a delicate balance between stimulating growth and managing rising prices. Inflationary pressures, driven by supply chain disruptions, increased demand, and fiscal stimulus measures, pose challenges to businesses and governments alike. The ability to mitigate inflationary risks while maintaining competitiveness is a delicate balancing act that requires astute policy decisions and proactive measures.

In a context in which, more than uncertainty, we are facing ignorance regarding the challenges that the future is bringing us, some themes remain on the top of the minds of policymakers and executives. First, the importance of technology as a key driver of productivity and growth. Second, a search of sustainable business models for companies, and the regulatory and institutional changes required to make them successful. Third, a rethinking of the benefits and costs of free trade, and the subsequent increase in protectionist measures in many countries.

As we delve into the pages of the IMD World Competitiveness Yearbook 2023, we encourage readers to reflect upon the implications of growing uncertainty, inflation, and geopolitical conflicts. By understanding the intricacies of these challenges and their impact on competitiveness, we can collectively work towards a more stable, resilient, and prosperous future.

Professor Arturo BrisDirector
IMD World Competitiveness Center

The IMD World Competitiveness Center

For more than thirty years, the IMD World Competitiveness Center has pioneered research on how countries and companies compete to lay the foundations for sustainable value creation. The competitiveness of nations is probably one of the most significant developments in modern management and IMD is committed to leading the field. The World Competitiveness Center conducts its mission in cooperation with a network of Partner Institutes in 57 countries to provide the government, business and academic communities with the following services:

- > Competitiveness Special Reports
- > Competitiveness Prognostic Reports
- > Workshops/Mega Dives on competitiveness
- > IMD World Competitiveness Yearbook
- > IMD World Digital Competitiveness Ranking
- > IMD World Talent Ranking

The IMD World Competitiveness Center team

At IMD:

Navigating a fragmented globalization landscape

Dr. Christos Cabolis Chief Economist IMD World Competitiveness Center

Over the last few years, the global economy has encountered a series of disruptive events, each leaving a lasting impact on subsequent years and therefore highly relevant to the 2023 macroeconomic landscape.

While policies implemented to address the global consequences of the pandemic have effectively mitigated certain risks, they have also inadvertently given rise to new challenges – the looming threat of inflation prominent among them. By exploring these complex patterns, we can better understand the priorities of both the public and private sectors.

Inflation: How did we get here?

In 2022, the world's focus gradually shifted from the protracted pandemic to growing concerns about inflation and geopolitical risks. Despite the emergence of the Omicron variant of COVID-19 early last year, the global narrative increasingly shifted towards the issues of rising prices and geopolitical uncertainties. This change in focus calls for a deeper examination of how the inflationary landscape has evolved and of its implications for various stakeholders.

The tumultuous events of 2020 triggered a severe global economic downturn, as nations were compelled to enforce stringent lockdowns and restrictions to mitigate the spread of the COVID-19 virus. This led to significant disruptions across industries such as travel, hospitality, and retail, among others.

Moreover, the disruption of global supply chains profoundly impacted economies, resulting in shortages of critical goods like personal protective equipment and price hikes due to the subsequent imbalances between supply and demand. Governments responded with fiscal measures, monetary interventions, and ambitious vaccine distribution programs to try and revive economies. However, these well-intentioned efforts inadvertently paved the way for a new challenge: inflation. General price levels for goods and services experienced a steady ascent, warranting attention and concern.

Figure 1 depicts the turbulent journey of the consumer price index (CPI) over the past five years, based on data from the IMD World Competitiveness Center. Before 2020, the CPI exhibited a moderate

decline across various regions. However, the subsequent three years witnessed a significant rise in CPI as inflation surged, reshaping economic landscapes and unsettling markets. The highest increase was experienced by countries in Ex-CIS & Central Asia with Western Asia & Africa and Eastern Europe following closely behind. Southern Asia & the Pacific along with Eastern Asia experienced the lowest levels of inflation, on average.

Inflation erodes consumers' purchasing power with each price surge. Additionally, the distortion of price signals caused by inflation creates an environment in which production decisions become suboptimal as producers struggle to make accurate assessments of market conditions. As a result, resources are misallocated, leading to inefficiencies in the economy. The resulting decline in consumer confidence exacerbates overall economic challenges, casting doubt on the prospects of a robust recovery.

In addition to supply-chain disruptions and rising prices of raw materials, another reason for inflation is the ability of busi-

nesses to roll over the costs of said materials and increases in wages to consumers. Encouragingly, after a year of central banks worldwide increasing interest rates to tackle rising prices, inflation seems to stabilize if not decelerate currently. Take, for instance, April 2023's inflation rate in the US which, at 4.9%, is lower than that for March 2023 (5%) and February 2023 (6%), continuing the decline that began in June 2022, according to Statista data

Analysts, nevertheless, are expecting inflation to be a key consideration in the minds of public and private sector decision-makers in 2023 and beyond, and one reason is the tight labor markets found worldwide. Figure 2 outlines the average unemployment rate across different regions for the last five years. All regions are experiencing declining levels of unemployment, oscillating between 4% and 6%. This implies that matching up employees and available positions will remain challenging and will possibly result in higher wages. Another reason is the re-emergence of geopolitical risk.

Geopolitical risk in 2023: No longer a dormant factor in decisionmaking

Geopolitical risk can be defined as the potential disruption of economic, political, and social stability due to existing geopolitical factors, such as political conflicts, trade disputes, or security threats between countries or regions. A once-dormant factor in decision-making, it has become a critical concern for public and private sector leaders; a consequence of the transition from a unipolar world dominated by the United States to a multipolar world, where players like China, the

European Union, and the United States are all vying for influence.

The escalation of US-China tariff disputes in 2018 marked an early sign of the reappearance of geopolitical risk. The imposition of tariffs on an increasing range of products resulted in heightened costs for importing entities and created uncertainty for private sector investments. The invasion of Ukraine by Russia in early 2022 further elevated concerns

Figure 1: Regional Consumer Price Index (CPI)

surrounding geopolitical risk, not least given the various reactions from different countries and regions. The conflict has led to the tragic loss of human life and the displacement of millions of Ukrainians. From an economic perspective, the war has disrupted the allocation and pricing of energy resources and agricultural commodities, as both countries are significant global producers. Moreover, supply chains have once again felt the impact of geopolitical tensions, exacerbating those concerns outlined earlier regarding inflation

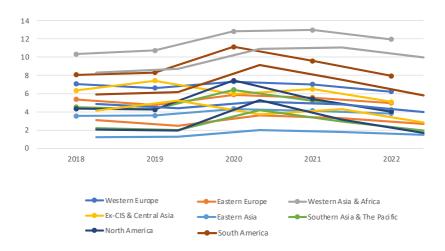

Figure 3 presents a five-year analysis of the average gasoline prices per region, using data from the IMD World Competitiveness Center data set. The findings indicate a substantial increase in gasoline prices in Eastern and Western Europe, as well as Eastern Asia. These price fluctuations are directly linked to geopolitical risk, as when there is political tension in

one part of the world, economic implications (higher prices for energy and food) arise in other parts of the world. The war in Ukraine has initiated a decoupling process between the United States and the European Union on the one hand, and Russia on the other. Additionally, a tense relationship between China and the United States in the Indo-Pacific region is feeding the growing geopolitical risks.

Therefore, concerns over geopolitical risks are expected to remain at the forefront of political and business leaders' minds.

Geopolitical risks have far-reaching implications for globalization, impacting the interdependency of economies. The trade of goods and services, the flow of capital, and the movement of people and ideas are profoundly influenced by geopolitical tensions. That is, geopolitical risks influence the shape of globalization.

Figure 2: Regional unemployment rate

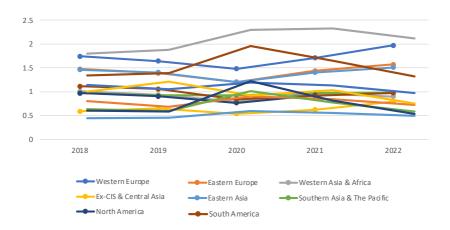

Globalization has been the center of criticism for some time. While globalization's push towards free trade and facilitation of the movement of people and capital have all undeniably contributed to heightened prosperity, trade-offs exist within this economic paradigm. For example, it has been reported by sources including the World Bank that China succeeded in moving millions of Chinese citizens above the poverty level partly thanks to globalization. However, the relocation of operations to lower-cost developing countries - mainly in Southeast Asia - has resulted in job losses for unskilled manufacturing workers in developed economies. Insufficient measures to address this dislocation, such as comprehensive upskilling and reskilling programs, have fueled a shift toward inward-looking policies, protectionist measures, and the emergence of populist political figures.

The impact of the COVID-19 pandemic further exacerbated these already existing dynamics, given the lockdowns, movement restrictions, and disrupted supply chains which have imposed even higher costs on the transportation of goods. Consequently, multinational companies have diversified their operations and reconsidered the geographical distribution of their activities. These factors, topped with the re-emergence of geopolitical risks, have together compelled firms to reassess their offshoring strategies. This has led to a paradigm shift toward reshoring (domestic production) and friend shoring (production in geopolitically aligned countries).

This trend toward a more fragmented world extends beyond economic considerations, encompassing political alliances and industrial policies. Countries and regions are increasingly prioritizing the safeguarding of their internal markets through targeted industrial policies. This

Figure 3: Regional gasoline price

is evident in the cases of China, the United States, and Europe, which have each implemented measures to strengthen and revitalize key domestic industries. Notably, the recent Inflation Reduction Act and CHIPS & Science Act in the US exemplify a concerted industrial policy approach to fortify essential sectors such as renewable energy production and the semiconductor industry. Europe's provisional agreement on the CHIPS Act likewise highlights a similar commitment to bolster the European semiconductor ecosystem.

Such policies have two significant implications. Firstly, driven by geopolitical considerations, the focus on internal markets has led to a fragmentation of both technology production and regulation. This fragmentation may pose potential challenges for developing countries, restricting their access to opportunities such as those available in the countries that initiate these policies – like the US. Several products – semiconductors, for instance – are not to be used in goods produced in the US, which is hindering their technological advancement.

Secondly, the emphasis being placed on renewable energy production presents an opportunity to drive much-needed innovation in this ambit, which could potentially reduce the costs associated with renewable energy generation. By investing in renewable energy, countries can simultaneously pursue sustainability goals and decrease reliance on traditional energy sources.

Today's fragmented world is expected to command the attention of public and private decision-makers—if it has not done so already. Successfully navigating this complex landscape necessitates proactive strategies that align with evolving geopolitical dynamics. Decision-makers must prioritize efforts to mitigate the adverse effects of fragmentation on developing countries while capitalizing on the potential for innovation in renewable energy production. Collaboration, knowledge sharing, and agile policy frameworks will be crucial in shaping a more resilient and inclusive globalization framework.

Navigating the polycrisis: Addressing interconnected challenges

The interplay of inflation, geopolitical risks, and a fragmented world is currently shaping decision-making and will continue to do so in the near future. These challenges are not isolated; instead, they are deeply interconnected, with each one magnifying the others. For example, geographical fragmentation can disrupt supply chains, leading to inflationary pressures. High inflation rates may prompt economies to adopt tighter monetary policies, impacting their output performance and potentially leading to a recession, as seen in the global financial crisis of 2008.

The concept of a "polycrisis," as described by Adam Tooze, aptly captures the interconnected nature of these crises. To effectively address this polycrisis, both governments and businesses must undertake challenging yet necessary steps. While the specific strategies will differ based on each economy and businesses' sources and competencies, there are two fundamental pillars of designing solutions:

1. Enhance awareness of interconnected challenges

Businesses must recognize and understand individual challenges while cultivating an elevated awareness of the complex interdependencies between inflation, geopolitical risks, and a fragmented world. Similarly, economies as a whole must acknowledge the strength of each challenge and its influence on

others. For instance, consider the impact of inflation on energy prices: countries that are energy producers benefit from price increases while energy-consuming economies struggle with higher prices.

2. Embrace agile and innovative solutions:

Navigating the polycrisis requires agility and adaptability. Research, such as the rankings produced by the World Competitiveness Center (WCC), shows that countries excelling in flexibility and adaptability tend to perform strongly. This includes the government's ability to adapt policies based on economic conditions and the perception of the economy's resilience by market executives. Both the broader economy and individual enterprises benefit from agility, as it enables them to explore unconventional solutions and modify plans in response to evolving circumstances. Flexibility is essential when faced with unexpected challenges arising from the interplay of inflation, geopolitical risks, and a fragmented world. Embracing an agile approach allows organizations to respond promptly and effectively to the changing landscape.

While the path ahead may present difficulties, organizations that proactively address the polycrisis will be better equipped to seize opportunities and drive sustainable growth in an increasingly fragmented world.

An analysis of the 2023 IMD World Competitiveness Ranking

Dr. José Caballero

Senior Economist IMD World Competitiveness Center

The results of the IMD World Competitiveness Ranking 2023 are influenced by several interrelated issues; taken together, we call it a "polycrisis" – an amalgam of (i) the risk of economic recession, (ii) inflation, (iii) geopolitical conflicts, and (iv) energy security. This crisis has impacted global competitiveness to different degrees. In some cases, it has led to increases in the rankings of economies; in others, it has been detrimental. For example, the rise in energy prices has benefitted some countries such as Saudi Arabia and Qatar, but negatively affected others, including Estonia and Latvia.

Denmark remains in the top spot, **Ireland** comes in second place – reaching the top three for the first time since its inclusion in the rankings in 1997 – and **Switzerland** drops to third.

 Denmark's strong performance is based on achievements across

Marco Pistis

Research Associate
IMD World Competitiveness Center

various competitiveness factors, although it has seen a decline in other areas such as economic performance.

- Ireland's rise in the ranking is mainly due to its robust economic performance.
- Switzerland maintains its high ranking thanks in part to its strong performance in government efficiency and infrastructure.

In what follows, we will explore how the competitiveness standings of the 64 economies we included in the 2023 edition of the IMD World Competitiveness Yearbook have been impacted by the polycrisis of the past year. We are delighted to include **Kuwait** this year for the first time. As with last year's edition, Russia and Ukraine are not included in the 2023 ranking due to the limited reliability of the data collected.

Top 10 2023

Denmark remains at the top of the ranking with **Ireland** in second place. Ireland's achievement has been building up over the years. From its lowest position of 24th in 2011, it rose to 12th in 2020, reaching fifth (2000) and sixth (2017) place along the way. **Switzerland** moves down to third (from second) and **Singapore** also drops one position to fourth place. While the **Netherlands** improves, moving up to

fifth (from sixth), and **Taiwan, China** also gains one spot (up to sixth from seventh), **Hong Kong SAR** declines to seventh (from fifth), and **Sweden** drops from fourth to eighth place. The **USA** improves to claim ninth place, and the **UAE** rises from 12th to round up the top 10.

The continuously strong performance of **Denmark** at the top of the ranking is

based on its achievements across many competitiveness factors. It remains first in business efficiency and second in infrastructure, slightly improving in government efficiency to fifth (from sixth). At the sub-factor level, it improves in several aspects including domestic economy. employment, and societal framework as well as remaining at the top in productivity and efficiency, and management practices. Denmark also shows significant progress in several indicators. These include direct investment flows inward as a percentage of GDP (21st), gross fixed capital formation - real growth (14th). and investment in telecommunications (16th). The country also improves in export concentration by product (third), exchange rate stability (13th), and labor force growth $(24^{th}).$

However, our results also show that Denmark declined in the economic performance factor, dropping from 13th to 15th. Furthermore, the country has seen a decrease in interest payment (down to 15th from 10th), interest rate spread (to 34th from 29th), and foreign investors (to sixth from first, based on our question for executives on whether foreign investors can freely acquire control in domestic companies). It also experiences a decline in the indicator that assesses if companies are effective at responding to opportunities and threats (to sixth from first) and national culture (or openness to foreign ideas, to 22nd from 11th). Additionally, Denmark drops in investment incentives.

consumer price inflation, and portfolio investment liabilities. The country also falls in employment growth (31st from 26th) and youth unemployment (25th from 18th).

Ireland's sharp rise in the overall ranking is largely the result of its robust achievements in economic performance, rising from seventh to first. It also makes significant progress across other competitiveness factors, rising from 11th to third in both government and business efficiency. In addition, its ranking improves in several sub-factors including domestic economy (first), international investment subfactors (second), business legislation (third). productivity and efficiency (third), and attitudes and values (first). At the indicator level, Ireland achieves notable gains in direct investment flows abroad, gross fixed capital formation, and direct investment flows abroad in US dollars, ranking first, second, and fifth respectively. The country also improves in key areas such as the growth of exports of goods (34th), overall productivity (real growth PPP, 23rd), and the effectiveness of communications technology (25th).

In terms of government policies, Ireland advances in areas such as the effective management of public finance (eighth), government subsidies as a percentage of GDP (12th), and in the indicator that assesses whether immigration laws interfere with the hiring of overseas talent (fourth). The country also progresses in factors like the quality of air transporta-

tion as an enabler of business development (21st), the implementation of shareholders' rights (eighth), the effectiveness of management education (seventh), and the credibility of managers (third). In some areas, however, Ireland experiences a drop, such as in total indigenous energy production (from 49th to 54th), life expectancy at birth (from 13th to 18th), and business expenditure on R&D as a percentage of GDP (from 21st to 32nd). The country also drops in current account balance (from sixth to 13th) and consumer price inflation (22nd to 30th).

Despite a slight decline, Switzerland's strong performance across the competitiveness factors sustains its high overall ranking (third place). It remains in first position in government efficiency and infrastructure, ranks seventh in business efficiency (a decline from fourth), and improves in economic performance (18th from 30th). It advances in the international investment sub-factor (ninth) and societal framework sub-factor (fifth) and remains top in the institutional framework. health and environment, and education sub-factors. At the indicator level, the country also makes significant progress in several areas, including exchange rate stability (seventh), direct investment flows inward (31st), in the indicator that assesses whether the need for economic and social reforms is generally understood (fifth), unemployment rate - gender ratio [33rd], and interest rate spread [30th]. Other improvements are in the country's performance in the sustainable development goals (eighth) and total public expenditure on education (14th). It remains at the top in several indicators such as the effectiveness of university education and management education, and illiteracy. However, Switzerland faces setbacks in various areas such as initial public offerings (21st from 16th), the adequacy of cyber security in the private sector (20th from 15th), whether the management of cities supports business development (10th from fifth), and the effective use of big data and analytics by companies (30th

from 25th). The quality of primary school education as measured by the pupil-teacher ratio also declines (31st from 32nd) as well as the effective implementation of shareholders' rights and regulatory compliance – banking laws (eighth from second).

Singapore places fourth in the overall competitiveness ranking, a fall of one position from the previous year. This drop is mainly the result of a slight decline in the government efficiency factors and in all of its components, except for the societal framework sub-factor. That said, Singapore performs well across all competitiveness factors: third in economic performance, seventh in government efficiency, eighth in business efficiency, and ninth in infrastructure. At the sub-factor level, it improves in international investment (fourth), employment (second), productivity and efficiency (sixth), and labor market (fourth)

At the indicator level, Singapore sees a significant increase in labor force growth (up to eighth place), female labor force participation (up to 29th place), and long-term employment growth, rising to 12th place. Other improvements include sustainable development goals (44th). freedom of the press (51st), and real growth of overall productivity PPP (third). Singapore experiences declines in several areas related to government policies and regulations, including competition legislation (ninth from fourth), the effectiveness of bureaucracy (seventh from first), bribery and corruption (11th from 10th), and the adaptability of government policy (fourth from second). Other declines include the efficiency of large corporations (15th from seventh) and SMEs (26th from 11th), the implementation of apprenticeships (19th from 13th), and the availability of skilled labor (15th from eighth). Singapore also drops in several aspects of management practices such as the agility of companies (24th), entrepreneurship (38th), the social responsibility of companies (31st), and the education sub-factor (11th from sixth).

The **Netherlands** moves one place up to fifth, which results from its improvements in economic performance (11th) and business efficiency (second), and its continued robust performance in infrastructure (fifth). The Netherlands improves in several sub-factors including domestic economy (19th), international investment (13th), public finance (10th), and productivity and efficiency (fourth), reaching the top position in technological infrastructure. It makes significant progress in indicators such as portfolio investment liabilities (10th), labor force growth (11th), and real GDP growth (19th). There are also strong performances in cyber security (12th) and in the awareness of companies about changing market conditions (14th). Other advances at the indicator level include employment growth (26th), the impact of central bank policy on economic development (20th), females in parliament (16th), the efficient use of digital tools and technologies by the private sector (third), the implementation of apprenticeships (fourth), and whether scientific research legislation encourages innovation (fourth). However, the country witnesses a decline in several indicators including current account balance (14th), attitudes toward globalization (11th), youth unemployment (19th), sustainable development goals (16th), quality of air transportation (sixth), and the quality of primary school education as measured by the pupil-teacher ratio (43rd). It drops five places in each of these indicators. Furthermore, the results highlight the Netherlands' decline in economic and social reforms (15th), transparency (18th), social cohesion (22nd), skilled labor (25th), social responsibility (18th), and corporate boards' fulfillment of their duties (11th); in all these indicators, it has fallen by either seven or eight places since last year.

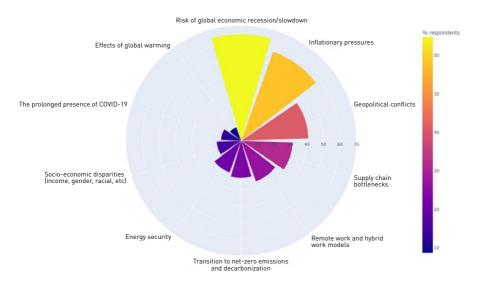

Taiwan, China secures a strong sixth place in the overall competitiveness ranking, an increase of one position. This is due to its performance in the business efficiency factor (fourth), in government efficiency (sixth), and in the infrastructure

factor (12th). Taiwan performs well in several sub-factors such as public finance (sixth), tax policy (seventh), productivity and efficiency (seventh), management practices (third), and scientific infrastructure (fifth). It makes significant progress in several indicators, including exchange rate stability (ninth), government budget surplus/deficit (ninth), and women with degrees (eighth). It also makes strides in energy intensity (33rd), competition legislation (20th), and internet bandwidth speed (13th).

Taiwan also reaches the top 10 in several indicators, including consumer price inflation (seventh) and government subsidies (10th). It improves in digital transformation in companies (seventh), portfolio investment assets (12th), quality of life (21st), and the efficiency of the distribution infrastructure (11th). However, in the economic performance factor, Taiwan drops to the 20th spot (from 11th). At the indicator level, it declines in several areas related to the perceptions of executives. including bribery and corruption (28th from 23rd), social cohesion (29th from 24th), the availability of competent senior managers (26th from 21st), central bank policy (16th from 11th), the efficiency of large corporations (14th from eighth), the effectiveness of university education (20th from 14th), and the availability of finance skills (20th from 14th). It also drops in women in management (42nd from 31st) and current account balance (eighth from third).

Overall, **Hong Kong SAR** ranks seventh, which represents a drop of two positions. This decline is mainly the result of a sharp drop in the domestic economy [56th] and employment [45th]. Nevertheless, Hong Kong SAR ranks second in the government efficiency factor, 11th in the business efficiency factor, and in 13th the infrastructure factor. However, it only reaches the 36th spot in the economic performance factor. Its performance remains strong in several sub-factors including international trade (fifth), International investment (third), tax policy (third), business legislation

Figure 1: Most important trends impacting business in 2023 according to executives (IMD Executive Opinion Survey, 2023)

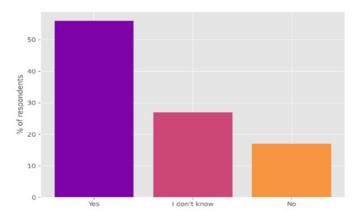

(first), management practices (sixth), and education (ninth). In the productivity and efficiency sub-factor, it drops to 12th (from sixth), and in the labor market sub-factor to 24th (from 20th). Hong Kong SAR strongly advances in portfolio investment liabilities (29th). It also rises in access to financial services – gender ratio (13th). In addition, it progresses in health infrastructure (18th). the adaptability of government policy (14th), transparency (ninth), and social cohesion (36th). Furthermore, it advances in attracting foreign highly skilled personnel (23rd), in the management of cities (third), and youth exclusion (10th). Hong Kong SAR experiences declines in the use of digital tools and technologies (22nd from 14th), customer satisfaction (23rd from 15th), and part-time employment (34th from 24th). It also sees significant declines in real GDP growth and per capita real GDP growth (down to 64th in both), government budget surplus/deficit (49th), and real growth of overall productivity PPP (50th).

Sweden remains a highly competitive economy ranking eighth overall, although

this represents a drop of four spots when compared to last year's ranking. The drop is mainly due to a decline or stagnation in all the competitiveness sub-factors with the largest decrease being in the labor market (16th from fourth). In any case, at the factor level, Sweden performs strongly in infrastructure and business efficiency, ranking fourth and sixth respectively. However, while its government efficiency factor ranking drops to 14th, the country's economic performance factor ranking falls to 28th (from 21st). Despite declines, Sweden continues to perform well in several sub-factors such as institutional framework (fifth from fourth), societal framework (sixth from fifth), productivity and efficiency (eighth from fourth), management practices (eighth from third), and education (eighth from fifth). Although Sweden significantly improves in a number of indicators, including direct investment flows inward (ninth). labor productivity (sixth), and portfolio investment assets (11th), the country also declines in a wide range of areas such as whether stock markets provide

Figure 2: Is your company willing to sacrifice profit and growth at the expense of environmental sustainability and social responsibility (in the event it comes down to a choice between the two)? (IMD Executive Opinion Survey, 2023)

NOTE: The IMD Executive Opinion survey was run between 17 February-23 May 2023, and was based on a sample of 4,060 C-level and mid-level managers from the 64 countries included in the study.

adequate financing to companies (sixth from first), worker motivation (15th from seventh), women on boards (11th from seventh), and the effectiveness of primary and secondary education (23rd from 13th). Several other declines are in indicators related to government efficiency including transparency (eighth from third), state ownership of enterprises (10th from fifth), the effectiveness of bureaucracy (11th from sixth), the adaptability of government policy (22nd from 13th), and the effectiveness of immigrations laws (34th from 11th).

The **USA** places ninth in the overall ranking. This slight increase is mainly due to a robust performance in the economic performance factor in which it ranks second. In the other competitiveness factors, the USA ranks 14th in business efficiency and sixth in infrastructure. Despite a slight improvement, it remains relatively low in the government efficiency factor (25th). At the sub-factor level, the USA continues to perform strongly in the domestic economy (fifth), international investment (first), finance (first), and

scientific infrastructure (first). Nevertheless, there are some sub-factors in which the country drops from already relatively low positions such as in attitudes and values (30th from 26th) and societal framework (41st from 40th).

The country improves its position in a number of indicators, including access to financial services - gender ratio (third), exports of goods – growth (22nd), and the economic impact of pollution problems (22nd). It also progresses in areas such as the growth of exports of commercial services (32nd), terms of trade index (20th), direct investment stocks inward as a percentage of GDP (22nd), labor force growth (29th), exchange rate stability (21st), and current account balance (46th). The USA declines in areas such as equal opportunity (32nd from 21st), export concentration by-product (11th from sixth), female labor force [21st from 22nd], and social cohesion (44th from 39th). It also falls in the rankings for indicators such as freedom of the press (30th from 23rd), tax evasion (28th from 20th), foreign investors (38th from

30th), and flexibility and adaptability to face new challenges (31st from 29th).

In 10th position, the **UAE** returns to the top of the ranking where it last was in 2021, when ninth. Its achievement is driven by its economic performance (fourth) and government efficiency (eighth). In addition, the UAE ranks well in the business efficiency factor (16th) and to a lesser extent in the infrastructure factor (26th). In the domestic economy sub-factor, the UAE moves up to fourth, and in the employment sub-factor up to sixth, reaching first position in the international trade sub-factor. Among the government efficiency sub-factors, the UAE remains strong in tax policy (fourth) and business legislation (ninth) but plummets to 31st in public finance. In infrastructure's sub-factors, the country remains

relatively low in scientific infrastructure (35th), health and environment (36th), and education (25th). The UAE improves its position in several indicators including overall productivity – real growth PPP (eighth), real GDP growth (fifth), and the spread of entrepreneurship (10th). Other important increases are in the growth of exports of commercial services (20th). real GDP growth per capita (20th), environmental agreements (ninth), and total public expenditure on education (48th). The UAE experiences declines in indicators such as regulatory compliance – banking laws (51st from 42nd), access to financial services (44th from 32nd), the effectiveness of public-private partnerships (11th from 10th), talent attraction and retention (43rd from 30th), and in the relocation threats of business (34th from 20th).

Global competitiveness trends 2023

The macroeconomic and geopolitical trends behind what we call a "polycrisis" are already reshaping the competitiveness landscape in 2023 on multiple levels. Both macroeconomic and business confidence indicators included in the IMD World Competitiveness Yearbook reflect the impact of these issues on the competitiveness of economies.

Regions and economies with a stable indigenous production of energy, solid supply chains, and trade balances have been able to cope with and, to a certain extent, benefit from these macroeconomic shifts. These economies have managed to increase their competitiveness despite challenging conditions, while those heavily relying on raw materials and energy imports have seen their competitiveness levels deteriorate.

While we see asymmetries in how these trends have affected economies across the globe and how leaders are responding to these shifts, confidence levels of the business community at the global level

seem to be uniformly gloomy. The IMD Executive Opinion Survey asks mid- and top-level executives about the competitiveness conditions in the economies in which they reside as well as a few additional questions related to executives' concerns about the economies in which they operate. In 2023, over 6,000 executives responded to the survey with an average of 100 from each of the economies included in the study.

Figure 1 shows executives' views from all the 64 countries included in the IMD World Competitiveness Yearbook on major business trends for 2023. Corporate leaders could choose up to three trends from the 10 options provided. The three greatest trends considered to be impacting businesses in 2023 were: the risk of a global economic recession or a slowdown in economic activities (65%), inflationary pressures (57.5%), and geopolitical conflicts (41%). The breakdown of these results by different regions reveals just how rife these concerns are among executives. Fears of a global recession,

Figure 3: Consumer Price Inflation in 2022 versus Overall Competitiveness Index (score 0-100) in 2023. Source: (IMD-WCC, 2023)

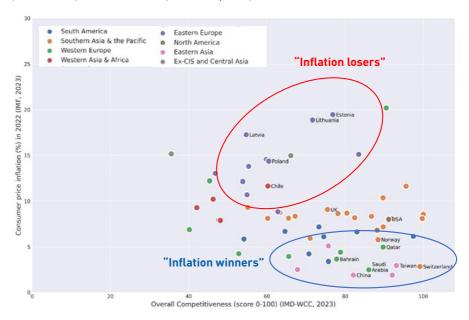

Figure 4: Current account balance (% GDP) in 2022 versus Overall competitiveness index (score 0-100) in 2023. Source: (IMD-WCC, 2023)

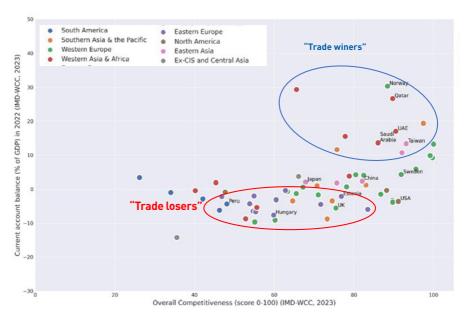

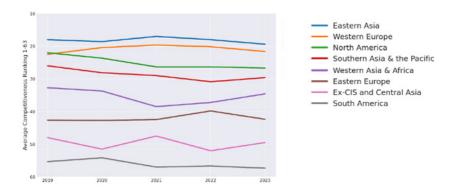

Figure 5: Average ranking positions by region in Overall Competitiveness 2019-2023. Source: IMD World Competitiveness Center (2023)

inflation, and geopolitical conflicts are the top three concerns for executives residing and operating in all regions covered by the yearbook, except for South American executives who see remote and hybrid work models as the third most important trend in place of geopolitical conflicts. Interestingly, environmental issues and climate change are still - as in 2022 - considered of secondary importance in 2023, behind geopolitical and macroeconomic trends affecting global markets. Just over a fifth (22.7%) and 8.7% of executives surveyed consider the transition to zero emissions and the impact of global warming, respectively, to be relevant trends in the short term.

A sense that environmental sustainability constitutes a secondary priority for companies in the face of pressing issues

brought about by geopolitical changes and inflation also emerges when looking at what executives prioritize in their everyday business decisions.

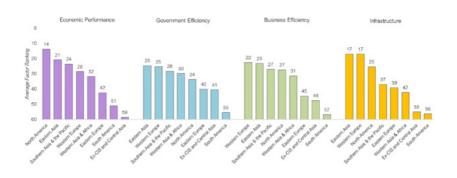

Figure 2 captures the results of a question in the executive survey on whether executives thought their companies would be willing to sacrifice profit or growth at the expense of environmental sustainability and social responsibility in the event it were not possible to pursue the two. A first observation here is that around one-third of the sample (2,000 executives), chose not to answer this question. Among those who answered it, 55% stated that environmental and social responsibility would come before profit and growth. Nevertheless, 45% stated that they would not be willing to sacrifice growth, or that they didn't know.

Regional competitiveness trends 2023

The polycrisis' effects on global markets have impacted competitiveness levels worldwide considerably in 2023. In particular, rises in energy prices and subsequent growth in inflation are creating winners and losers. **Figure 3** shows that

inflation impacted regional competitiveness scores with countries experiencing the highest inflation rates globally (mostly Eastern European economies) losing ground in 2023 over those with low levels

Figure 6: Average factor rank by region in 2023. Source: IMD World Competitiveness Center (2023)

of inflation (Eastern Asia and Western Asia and Africa).

Similarly, **Figure 4** illustrates how increased costs of energy and commodities have impacted current account balances which, in turn, have shifted regional competitiveness levels. Countries with positive balances have increased their competitiveness levels (Western Asia and Africa and Southern Asia & the Pacific economies) while others (Eastern European economies) have experienced a deterioration in their competitiveness.

Figure 5 presents the sub-regional overall competitiveness ranking trend for 2019 to 2023. Over the past year, Western Asia and Africa, Southern Asia & the Pacific, and Ex-CIS and Central Asia have all increased their competitiveness rankings while the other sub-regions remain relatively stagnant or decline in their overall average positions.

In Western Asia and Africa, competitiveness levels have kept rising for the second year in a row, reaching an average 34th place in 2023. Similarly, between 2022 and 2023 economies in Ex-CIS and Central Asia and Southern Asia & the

Pacific experience increases in average competitiveness levels of three (from 52nd to 49th) and one (from 30th to 29th) positions, respectively.

While remaining the most competitive regions in the world, both Eastern Asia (19th in 2023) and Western Europe (21st in 2023) reduced their average competitiveness rankings by one point in the past year. North American economies remain stable in 26th position in 2023. Eastern Europe is the region experiencing the largest decline in competitiveness. Economies in the region exhibit a reduction of three points in overall competitiveness. reaching an average 42nd position in 2023 and therefore bringing their competitiveness back to 2021 levels. Finally, South American economies experience a slight decline in competitiveness over the past year, down to an average 51th position in 2023.

Figure 6 presents the sub-regional average rankings at the competitiveness factor level. In 2023, Eastern Asia and Western Europe sub-regions are leaders in government efficiency, business efficiency, and infrastructure factors. However, in the Economic Performance

factor, North America displays higher ranks than both Eastern Asia and Western Europe, proof of its stronger resilience to inflationary pressures. For similar reasons, Western Asia and Africa, and Southern Asia & the Pacific improve their average ranking across all four competitiveness factors, gaining important positions in the economic performance and business efficiency factors compared to 2022.

Largest shifts

In the overall ranking, Indonesia experiences this year's largest increase to 34th position (from 44th). At the factor level, its progress is driven by robust achievements in economic performance (rising to 29th from 42nd) and business efficiency (20th from 31st). Indonesia also improves, to a lesser extent, in the government efficiency factor (31st from 35th). Although it progresses in all the components of infrastructure, it gains one position in that factor, rising to 51st mainly as a result of its performance in scientific Infrastructure (49th), health and the environment (58th), and education (51st).

Latvia experiences the largest drop in the overall ranking, moving to 51st (from 35th). Such a decline is mainly the result of its performance in government efficiency in which it drops to 39th from 28th and in business efficiency (51st from 31st). Latvia also decreases in economic performance (55th from 54th) and infrastructure (41st from 35th). To different degrees, it drops in all the components of government efficiency, business efficiency, and infrastructure. Some of the largest declines are in the public finance sub-factor (31st), labor market sub-factor (52nd), and management practices (60th).

Concluding remarks

The polycrisis of 2023 is having a significant impact on the competitiveness of economies worldwide. For instance, regions and countries with stable indigenous energy production, robust supply chains, and favorable trade balances have been able to maintain or improve their competitiveness. At the same time, economies heavily reliant on raw materials and energy imports have experienced declines. According to our results, global business confidence levels are gloomy, reflecting the concerns of executives with regard to the risk of a global economic recession or slowdown, inflationary pressures, and geopolitical conflicts. In this context, environmental issues and climate change become secondary concerns compared to macroeconomic and geopolitical ones.

Our results also show that among the regions we cover, Western Asia and Africa, Southern Asia & the Pacific, and Ex-CIS and Central Asia experienced increases in

their competitiveness rankings. Eastern Asia and Western Europe have slightly fallen in their average competitiveness positions while Eastern Europe experienced the largest decline in competitiveness. South American economies also dropped.

Overall, our results highlight the complex interplay of macroeconomic and geopolitical factors in driving competitiveness. They emphasize, for example, the importance of stable energy production, resilient supply chains, and favorable trade balances in maintaining or improving competitiveness in the face of global challenges. Finally, our results reveal some degree of prioritizing immediate economic concerns over environmental sustainability and social responsibility among the members of the private sector we surveyed.

Rankings in a Nutshell

The 2023 IMD World Competitiveness Ranking

2023 COMPETITIVENESS RANKING

The IMD World Competitiveness Ranking presents the 2023 overall ranking for the 64 economies covered by the WCY. The economies are ranked from the most to the least competitive. The Scores shown to the right are actually indices (0 to 100) generated for the unique purpose of constructing charts and graphics. The final column shows the improvement or decline from the previous year.

2023 COMPETITIVENESS RANKING

		Score

Methodology in a Nutshell

- > The IMD World Competitiveness ranking analyzes and ranks the capacity of countries to create and maintain an environment which sustains the competitiveness of enterprises.
- > It means that we assume that wealth creation takes place primarily at an enterprise level level (whether private or state-owned) - this field of research is called: "competitiveness of enterprises".
- > However, enterprises operate in a national environment which enhances or hinders their ability to compete domestically or internationally this field of research is called: "competitiveness of countries" and is covered by the World Competitiveness ranking.
- > Based on analysis made by leading scholars and by our own research and experience, the methodology of the World Competitiveness ranking thus divides the national environment into four main factors:
 - Economic Performance
 - Government Efficiency
 - Business Efficiency
 - Infrastructure
- In turn, each of these factors is divided into 5 sub-factors which highlight every facet of the areas analyzed. Altogether, the World Competitiveness ranking features 20 such sub-factors.
- These 20 sub-factors comprise 336 criteria, although each sub-factor does not necessarily have the same number of criteria (for example, it takes more criteria to assess Education than to evaluate Prices).
- > Each sub-factor, independently of the number of criteria it contains, has the same weight in the overall consolidation of results, that is 5% (20x5 = 100).
- > Criteria can be hard data, which analyzes competitiveness as it can be measured (e.g. GDP), or soft data, which analyzes competitiveness as it is perceived (e.g. availability of competent managers). Hard criteria represent a weight of 2/3 in the overall ranking whereas the survey data represent a weight of 1/3.
- In addition, some criteria are for background information only, which means that they are not used in calculating the overall competitiveness ranking (e.g. population under 15).
- > Finally, aggregating the results of the 20 sub-factors makes the total consolidation, which leads to the overall ranking of the IMD World Competitiveness ranking.

What is the IMD World Competitiveness Ranking?

Computing the Rankings

Competitiveness Country Profiles

Argentina

Competitiveness Trends - Overall

CHALLENGES IN 2023

- Accommodate the impact of growing uncertainty on the exchange rate due to the upcoming presidential elections.
- Control inflation through prudent monetary, financial, and fiscal measures, in line with the IMF deal.
- Reverse production stagnation and balance on goods deficit in the energy sector, encouraging new investments.
- Continue reform of social transfers scheme, to generate incentives for job creation.

Australia

Competitiveness Trends - Overall

OVERALL PERFORMANCE (64 countries)

CHALLENGES IN 2023

- Bring inflation down while ensuring a soft landing for the economy.
- Reinvigorate the policy pillars of Australia's economic success through reviews of monetary and migration policies.
- Return productivity growth to long-term averages.
- Manage the clean energy transition in the most efficient and orderly manner possible.
- Grow and deepen Australia's export base after COVID-19.

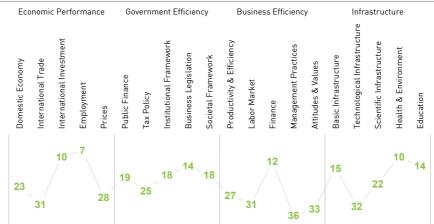

BASIC FACTS

COMPETITIVENESS LANDSCAPE

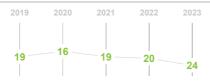

Austria

Competitiveness Trends - Overall

OVERALL PERFORMANCE (64 countries)

CHALLENGES IN 2023

- Intra-ecological conflicts impede energy transformation.
- Excessive inflation to be addressed.
- Reform of pension system and health care system still pending.
- Administrative reform to be pursued at both provincial (Länder) and local levels (Gemeinden).
- Early segregation in education to be addressed (severely hampers the integration and educational progress of migrant children).

COMPETITIVENESS LANDSCAPE

Belgium

Competitiveness Trends - Overall

OVERALL PERFORMANCE (64 countries)

CHALLENGES IN 2023

- Absorb inflation impacts and avoid a price-wage spiral. The correct application of the competitiveness law that restricts real wage rises is crucial.
- · Continue efforts to reduce the tax wedge.
- Address labor market shortages by promoting lifelong learning and better guidance towards STEM/technical jobs.
- Increase investments in infrastructure and green and digital technologies.
- Improve unsustainable government finances by lowering expenditure and activating the large share of people on long-term paid sick leave.

COMPETITIVENESS LANDSCAPE

Brazil

Competitiveness Trends - Overall

OVERALL PERFORMANCE (64 countries)

CHALLENGES IN 2023

- Implement a tax reform that fosters competitiveness.
 Ensure a new fiscal anchor that reconciles social spending with responsibility in public accounts.
- Encourage and attract green investments allied to a resilient, multi-ministerial environmental policy.
- Ensure access to quality public education and joint action with the private sector to train and retrain the workforce.
- Reverse production stagnation and encourage new investments to promote job creation.

COMPETITIVENESS LANDSCAPE

Canada

Competitiveness Trends - Overall

OVERALL PERFORMANCE (64 countries)

CHALLENGES IN 2023

- Persisting inflation and the beginning of a recession.
- Continuing geopolitical tensions, coupled with a global energy crisis that puts pressure on net-zero goals.
- A tight labor market in high-touch sectors following years of contraction; tightness is coupled with changing skill needs for key jobs.
- Continuing extreme weather events (floods, fires, etc.) that threaten biodiversity and negatively impact human wellbeing and the economy.

COMPETITIVENESS LANDSCAPE

Croatia

Competitiveness Trends - Overall

OVERALL PERFORMANCE (64 countries)

CHALLENGES IN 2023

- Rise in energy prices due to the war in Ukraine.
- Negative demographic trends, and consequently workforce shortages in key sectors of Croatian economy, like tourism and construction, also in healthcare, crafts & services, etc.
- Tax system that is not supportive of entrepreneurs: for example, introduction of windfall tax for all industry sectors, not only energy.
- Educational system that is not adequate for the needs of 21st century industry.
- Prerequisites for green and digital transition are still not in place.

Mongolia

Competitiveness Trends - Overall

OVERALL PERFORMANCE (64 countries)

CHALLENGES IN 2023

- Inflation is still high and persistent, pushing the Central Bank to tighten lending.
- Persisting social challenges such as poverty, unemployment and inequality remain high.
- Exchange rate is high and unpredictable, making investment decisions harder.
- Geopolitical tensions resulting from Russo-Ukrainian War and tension between Beijing and Taipei could negatively impact the Mongolian economy.
- Dependency on political cycle leading up to elections may create economic disruption.

UAE

Competitiveness Trends - Overall

OVERALL PERFORMANCE (64 countries)

CHALLENGES IN 2023

- Continue the momentum for economic diversification and FDI attraction.
- Minimize the negative impact of industrial development on the environment.
- Equip youth with skills to seize employment opportunities and diversify career pathways.
- Foster the business environment to diversify exports, moving away from an oil-based economy.
- Implement the right integration of fiscal and monetary policies to aid in overcoming the volatility of the global recession.

COMPETITIVENESS LANDSCAPE

Venezuela

Competitiveness Trends - Overall

OVERALL PERFORMANCE (64 countries)

CHALLENGES IN 2023

- Strengthen regulatory framework: investors require confidence in the law and public institutions.
- Move from economic instability to reconstruction in light of recovery stagnation, consumption slowdown, inflation acceleration, upward pressure on exchange rate.
- Solve problem of basic services and infrastructure for homes and industries.
- Simplify administrative procedures and reduce high tax burden.
- Lack of access to financing for good projects and companies with elements to expand production capacity.

Government Efficiency

- [S] Survey data
- [B] Background data

2.1 Public Finance

Z. I I ubde I munec	
2.1.01 [B] Government budget surplus/deficit (\$bn)	US\$ billions
2.1.02 Government budget surplus/deficit (%)	Percentage of GDP
2.1.03 [B] Total general government debt (\$bn)	US\$ billions
2.1.04 Total general government debt (%)	Percentage of GDP
2.1.05 [B] Total general government debt-real growth	Percentage change, based on national currency in constant prices
2.1.06 Interest payment (%)	Percentage of current revenue
2.1.07 [S] Public finances	Public finances are being efficiently managed
2.1.08 [S] Tax evasion	Tax evasion is not a threat to your economy
2.1.09 [S] Pension funding	Pension funding is adequately addressed for the future
2.1.10 General government expenditure	Percentage of GDP
- · · · · · · · · · · · · · · · · · · ·	-

2.2 Tax Policy

Z.Z Tax Folicy	
2.2.01 Collected total tax revenues	Percentage of GDP
2.2.02 Collected personal income tax	On profits, income and capital gains, as a percentage of GDP
2.2.03 [B] Collected corporate taxes	On profits, income and capital gains, as a percentage of GDP
2.2.04 [B] Collected indirect tax revenues	Taxes on goods and services as a percentage of GDP
2.2.05 [B] Collected capital and property taxes	Percentage of GDP
2.2.06 [B] Collected social security contribution	Compulsory contribution of employees and employers as a percentage of GDP
2.2.07 Corporate tax rate on profit	Maximum tax rate, calculated on profit before tax
2.2.08 Consumption tax rate	Standard rate of VAT/GST
2.2.09 Employer social security tax rate	%
2.2.10 Employee social security tax rate	%
2.2.11 [S] Real personal taxes	Real personal taxes do not discourage people from working or seeking advancement

2.3 Institutional Framework

Central Bank

Centrat Dank	
2.3.01 [B] Real short-term interest rate	Real discount / bank rate
2.3.02 [S] Cost of capital	Cost of capital encourages business development
2.3.03 Interest rate spread	Lending rate minus deposit rate
2.3.04 Country credit rating	Index (0-60) of three country credit ratings:
	Fitch, Moody's and S&P
2.3.05 [S] Central bank policy	Central bank policy has a positive impact on economic development
2.3.06 [B] Foreign currency reserves (\$bn)	US\$ billions
2.3.07 Foreign currency reserves per capita	US\$ per capita
2.3.08 Exchange rate stability	Parity change from national currency to SDR, 2021 / 2019
State Efficiency	
2.3.09 [S] Legal and regulatory framework	The legal and regulatory framework encourages competitiveness of enterprises
2.3.10 [S] Adaptability of government policy	Adaptability of government policy to changes in the economy is high
2.3.11 [S] Transparency	Transparency of government policy is satisfactory
2.3.12 [S] Bureaucracy	Bureaucracy does not hinder business activity
2.3.13 [S] Bribery and corruption	Bribing and corruption do not exist
2.3.14 Rule of law	Index
2.3.15 [S] Sustainable development goals	Country performance on the 17 SDGs
2.3.16 [S] Democracy index	EIU Overall Democracy Index,
	©The Economist Intelligence Unit Limited 2020

2.4 Business Legislation

Openness	
2.4.01 Tariff barriers	Tariffs on imports: Applied weighted mean tariff rate for all products
2.4.02 [S] Protectionism	Protectionism does not impair the conduct of your business
2.4.03 [S] Public sector contracts	Public sector contracts are sufficiently open to foreign bidders
2.4.04 [S] Foreign investors	Foreign investors are free to acquire control in domestic companies
2.4.05 [S] Capital markets	Capital markets (foreign and domestic) are easily accessible
2.4.06 [S] Investment incentives	Investment incentives are attractive to foreign investors
Competition and Regulations	
2.4.07 Government subsidies	To private and public companies as a percentage of GDP
2.4.08 [S] Subsidies	Subsidies do not distort fair competition and economic development
2.4.09 [S] State ownership of enterprises	State ownership of enterprises is not a threat to business activities
2.4.10 [S] Competition legislation	Competition legislation is efficient in preventing unfair competition
2.4.11 [S] Parallel economy	Parallel (black-market/unrecorded) economy does not impair economic development
2.4.12 New business density	Registered new businesses per 1'000 people aged 15-64
2.4.13 [S] Creation of firms	Creation of firms is supported by legislation
2.4.14 Start-up days	Number of days to start a business
2.4.15 Start-up procedures	Number of procedures to start a business
Labor Regulations	
2.4.16 [S] Labor regulations	Labor regulations do not hinder business activities
2.4.17 [S] Unemployment legislation	Unemployment legislation provides an incentive to look for work
2.4.18 [S] Immigration laws	Immigration laws do not prevent your company from employing foreign labor
2.4.19 Redundancy costs	Number of weeks of salary

2.5 Societal Framework

2.5.01 [S] Justice	Justice is fairly administered
2.5.02 Homicide	Intentional homicide, rate per 100'000 population
2.5.03 Ageing of population	Population over 65, percentage of total population
2.5.04 [S] Risk of political instability	The risk of political instability is very low
2.5.05 [S] Social cohesion	Social cohesion is high
2.5.06 Gini coefficient	Equal distribution of income scale: 0 (absolute equality) to 100 (absolute inequality)
2.5.07 [B] Income distribution - lowest 10%	Percentage of household incomes going to lowest 10% of households
2.5.08 [B] Income distribution - highest 10%	Percentage of household incomes going to highest 10% of households
2.5.09 Income distribution - lowest 40%	Percentile going to the lowest 40% of households
2.5.10 Income distribution - lowest 40% - growth	Percentile going to the lowest 40% of households - growth
2.5.11 [S] Equal opportunity	Equal opportunity legislation in your economy encourages economic development
2.5.12 Females in parliament	Percentage of total seats in Parliament
2.5.13 Unemployment rate - gender ratio	Difference between the female and male unemployement rates
2.5.14 Gender inequality	Gender Inequality Index (UNDP)
2.5.15 Disposable Income	Female / male ratio
2.5.16 Freedom of the Press	Reporters Without Borders: World Press Freedom Score
2.5.17 Inequality in life expectancy	Index

Business Efficiency

- [S] Survey data
- [B] Background data

3.1 Productivity and Efficiency

o. I I roductivity and Emiciency	
3.1.01 Overall productivity (PPP)	Estimates: GDP (PPP) per person employed, US\$
3.1.02 Overall productivity (PPP) - real growth	Estimates: Percentage change of real GDP per person employed
3.1.03 Labor productivity (PPP)	Estimates: GDP (PPP) per person employed per hour, US\$
3.1.04 [B] Agricultural productivity (PPP)	Estimates: Related GDP (PPP) per person employed in agriculture, US\$
3.1.05 [B] Productivity in industry (PPP)	Estimates: Related GDP (PPP) per person employed in industry, US\$
3.1.06 [B] Productivity in services (PPP)	Estimates: Related GDP (PPP) per person employed in services, US\$
3.1.07 [S] Workforce productivity	Workforce productivity is competitive by international standards
3.1.08 [S] Large corporations	Large corporations are efficient by international standards
3.1.09 [S] Small and medium-size enterprises	Small and medium-size enterprises are efficient by international standards
3.1.10 [S] Use of digital tools and technologies	Companies are very good at using digital tools & technology to improve performance

3.2 Labor Market

Costs

Costs	
3.2.01 Compensation levels	Total hourly compensation in manufacturing (wages + supplementary benefits) US\$
3.2.02 [B] Unit labor costs for total economy	Percentage change
3.2.03 Remuneration in services professions	Gross annual income including supplements such as bonuses, US\$
3.2.04 Statutory minimum wage	Statutory gross monthly minimum wage
3.2.05 Remuneration of management	Total base salary plus bonuses and long-term incentives, US\$
3.2.06 [B] Remuneration spread	Ratio of CEO to personal assistant remuneration
Relations	
3.2.07 Working hours	Average number of working hours per year
3.2.08 [S] Worker motivation	Worker motivation in companies is high
3.2.09 [B] Industrial disputes	Working days lost per 1,000 inhabitants per year (average 2018-2020)
3.2.10 [S] Apprenticeships	Apprenticeships are sufficiently implemented
3.2.11 [S] Employee training	Employee training is a high priority in companies
Availability of Skills	
3.2.12 Labor force	Employed and registered unemployed (millions)
3.2.13 Labor force (%)	Percentage of population
3.2.14 Labor force growth	Percentage change
3.2.15 Labor force long-term growth	Estimates: five year percentage change
3.2.16 Part-time employment	Percentage of total employment
3.2.17 Female labor force	Percentage of total labor force
3.2.18 Foreign labor force - migrant stock	Migrant stock, age 20-64, % of population
3.2.19 [S] Skilled labor	Skilled labor is readily available
3.2.20 [S] Finance skills	Finance skills are readily available
3.2.21 [S] Attracting and retaining talents	Attracting and retaining talents is a priority in companies
3.2.22 [S] Brain drain	Brain drain (well-educated & skilled people) does not hinder competitiveness in your economy
3.2.23 [S] Foreign highly-skilled personnel	Foreign highly-skilled personnel are attracted to your country's business environment
3.2.24 [S] International experience	International experience of senior managers is generally significant
3.2.25 [S] Competent senior managers	Competent senior managers are readily available

3.3 Finance

Donk Efficience

Bank Efficiency	
3.3.01 Banking sector assets	Percentage of GDP
3.3.02 [B] Financial cards in circulation	Number of cards per capita
3.3.03 Financial card transactions	US\$ per capita
3.3.04 Access to financial services	Proportion of adults with a bank account or mobile-money-service provider
3.3.05 Access to financial services - gender ratio	Difference between female/male access to a bank account or mobile-money-service provider
3.3.06 [S] Banking and financial services	Banking and financial services do support business activities efficiently
3.3.07 [S] Regulatory compliance (banking laws)	Regulatory compliance is sufficiently developed

3.5.03 [S] National culture The national culture is open to foreign ideas 3.5.04 [S] Flexibility and adaptability Flexibility and adaptability of people are high when faced with new challenges 3.5.05 [S] Need for economic and social reforms The need for economic and social reforms is generally well understood 3.5.06 [S] Digital transformation in companies Digital transformation in companies is generally well understood	3.5.02 [S] Image abroad or branding	
3.5.04 [S] Flexibility and adaptability Flexibility and adaptability of people are high when faced with new challenges 3.5.05 [S] Need for economic and social reforms The need for economic and social reforms is generally well understood Digital transformation in companies is generally well understood	3.5.03 [S] National culture	
3.5.05 [S] Need for economic and social reforms The need for economic and social reforms is generally well understood 3.5.06 [S] Digital transformation in companies Digital transformation in companies is generally well understood	3.5.04 [S] Flexibility and adaptability	Flexibility and adaptability of people are high when faced with new challenges
3.5.06 [S] Digital transformation in companies Digital transformation in companies is generally well understood		
	3.5.06 [S] Digital transformation in companies	
	3.5.07 [S] Value system	The value system in your society supports competitiveness

Infrastructure

[S] Survey data [B] Background data

4.1	Basic	Infras	truc	ture
-----	-------	--------	------	------

4.1.01 [B] Land area	Square kilometers (*000)
4.1.02 Arable area	Square meters per capita
4.1.03 Water resources	Total internal renewable per capita in cubic meters
4.1.04 [S] Access to water	Access to water is adequately ensured and managed
4.1.05 [S] Management of cities	Management of cities supports business development
4.1.06 [B] Population - market size	Estimates in millions
4.1.07 Population - growth	Percentage change
4.1.08 [B] Dependent Population	Percentage of total population
4.1.09 Dependency ratio	Population under 15 & over 64 years old, divided by active population (15-64 years)
4.1.10 Roads	Density of the network, km roads/square km land area
4.1.11 Railroads	Density of the network, km per square km
4.1.12 [B] Air transportation	Number of passengers carried by main companies, thousands
4.1.13 [S] Quality of air transportation	Quality of air transportation encourages business development
4.1.14 [S] Distribution infrastructure	The distribution infrastructure of goods and services is generally efficient
4.1.15 [S] Energy infrastructure	Energy infrastructure is adequate and efficient
4.1.16 [B] Total indigenous energy production	Millions MTOE
4.1.17 Total indigenous energy production (%)	Percentage of total requirements in tons of oil equivalent
4.1.18 [B] Total final energy consumption	Millions MTOE
4.1.19 [B] Total final energy consumption per capita	MT0E per capita
4.1.20 Electricity costs for industrial clients	US\$ per kwh

4.2 Technological Infrastructure

4.2.01 Investment in telecommunications	Percentage of GDP
4.2.02 Mobile broadband subscribers	4G & 5G market, % of mobile market
4.2.03 Mobile telephone costs	Monthly blended average revenue per user US\$
4.2.04 [S] Communications technology	Communications technology (voice and data) meets business requirements
4.2.05 Secure internet servers	Worldwide share/ Source: Computer Industry Almanac
4.2.06 Internet users	Number of internet users per 1000 people/ Source: Computer Industry Almanac
4.2.07 Broadband subscribers	Number of subscribers per 1000 inhabitants
4.2.08 Internet bandwidth speed	Average speed (Mbps)
4.2.09 [S] Digital/Technological skills	Digital/technological skills are readily available
4.2.10 [S] Qualified engineers	Qualified engineers are available in your labor market
4.2.11 [S] Public-private partnerships	Public and private sector ventures are supporting technological development
4.2.12 [S] Development and application of technology	Development and application of technology are supported by the legal environment
4.2.13 [S] Funding for technological development	Funding for technological development is readily available
4.2.14 High-tech exports (\$)	US\$ millions
4.2.15 High-tech exports (%)	Percentage of manufactured exports
4.2.16 ICT Service Exports (%)	Percentage of Service Exports
4.2.17 [S] Cyber security	Cyber security is being adequately addressed by corporations

4.3 Scientific Infrastructure

4.5 Scientific filli astructure	
4.3.01 Total expenditure on R&D (\$)	US\$ millions
4.3.02 Total expenditure on R&D (%)	Percentage of GDP
4.3.03 [B] Total expenditure on R&D per capita (\$)	US\$ per capita
4.3.04 Business expenditure on R&D (\$)	US\$ millions
4.3.05 Business expenditure on R&D (%)	Percentage of GDP
4.3.06 Total R&D personnel	Full-time work equivalent (FTE thousands)
4.3.07 Total R&D personnel per capita	Full-time work equivalent (FTE) per 1000 people
4.3.08 [B] Total R&D personnel in business enterprise	Full-time work equivalent (FTE thousands)
4.3.09 [B] Total R&D personnel in business per capita	Full-time work equivalent (FTE) per 1000 people
4.3.10 Researchers in R&D per capita	Full-time work equivalent (FTE) per 1000 people
4.3.11 Graduates in Sciences	% of graduates in ICT, Engineering, Math & Natural Sciences
4.3.12 Scientific articles	Scientific articles published by origin of author
4.3.13 [B] Nobel prizes	Awarded in physics, chemistry, physiology or medicine, & economics since 1950

4.3.14 Nobel prizes per capita	Awarded in physics, chemistry, etc and economics since 1950 per million people
4.3.15 Patent applications	Number of applications filed by applicant's origin
4.3.16 Patent applications per capita	Number of applications filed by applicant's origin, per 100,000 inhabitants
4.3.17 Patents grants	Number of patents granted by applicant's origin (average 2017-2019)
4.3.18 Number of patents in force	By applicant's origin, per 100,000 inhabitants
4.3.19 Medium- and high-tech value added	Proportion of total manufacturing value added, expressed as a percentage
4.3.20 [S] Scientific research legislation	Laws relating to scientific research do encourage innovation
4.3.21 [S] Intellectual property rights	Intellectual property rights are adequately enforced
4.3.22 [S] Knowledge transfer	Knowledge transfer is highly developed between companies and universities
4.4 Health and Environment	
4.4.01 Total health expenditure	Percentage of GDP
4.4.02 [B] Total health expenditure per capita	US\$ per capita
4.4.03 [B] Public expenditure on health (%)	Percentage of total health expenditure
4.4.04 [S] Health infrastructure	Health infrastructure meets the needs of society
4.4.05 Universal health care covereage index	Index (0-100) measuring coverage of essential health services
4.4.06 Life expectancy at birth	Average estimate
4.4.07 [B] Healthy life expectancy	Average estimate
4.4.08 [B] Infant mortality	Under five mortality rate per 1000 live births
4.4.09 Medical assistance	Number of inhabitants per physician and per nurse
4.4.10 (B) Urban population	Percentage of total population
4.4.11 Human development index	Combines economic - social - educational indicators Source: HDR
4.4.12 Energy intensity	Total energy consumed for each 1000 US\$ of GDP in MT0E
4.4.13 Safely treated waste water	Percentage of waste water
4.4.14 Water use efficiency	US\$ per cubic metre
4.4.15 [B] CO2 emissions	Metric tons of carbon dioxide
4.4.16 CO2 emissions intensity	CO2 industrial emissions in metric tons per one million US\$ of GDP
4.4.17 Exposure to particle pollution	Mean population exposure to PM2.5, Micrograms per cubic metre
4.4.18 Renewable energies (%)	Share of renewables in total energy requirements, %
4.4.19 Forest area growth	Five year percentage change of hectares
4.4.20 [B] Total biocapacity	Global hectares per capita of biologically productive space
4.4.21 [B] Ecological footprint	Global hectares per person
4.4.22 Ecological balance (reserve/deficit)	Total biocapacity minus total footprint in global hectare per capita
4.4.23 Environment-related technologies	Development of environment-related technologies, % inventions worldwide
4.4.24 Environmental agreements	Multilateral agreements on hazardous waste, proportion fulfilled
4.4.25 [S] Sustainable development	Sustainable development is a priority in companies
4.4.26 [S] Pollution problems	Pollution problems do not seriously affect your economy
4.4.27 [S] Environmental laws	Environmental laws and compliance do not hinder the competitiveness of businesses
4.4.28 [S] Quality of life	Quality of life is high
•	

4.5 Education

4.5.01 Total public expenditure on education	Percentage of GDP
4.5.02 [B] Total public exp. on education per capita	US\$ per capita
4.5.03 Total public expenditure on education per stude	nt Spending per enrolled pupil/student, all levels
4.5.04 Pupil-teacher ratio (primary education)	Ratio of students to teaching staff
4.5.05 Pupil-teacher ratio (secondary education)	Ratio of students to teaching staff
4.5.06 Secondary school enrollment	Percentage of relevant age group receiving full-time education
4.5.07 Higher education achievement	% of population that has attained at least tertiary education for persons 25-34
4.5.08 Women with degrees	Share of women who have a degree in the population 25-65
4.5.09 Student mobility inbound	Foreign tertiary-level students per 1000 inhabitants
4.5.10 [B] Student mobility outbound	National tertiary-level students studying abroad per 1000 inhabitants
4.5.11 Educational assessment - PISA	PISA survey of 15-year olds
4.5.12 [B] Students who are not low achievers - PISA	% of students who are not low achievers in maths, sciences and reading
4.5.13 [B] English proficiency - TOEFL	TOEFL scores
4.5.14 [S] Primary and secondary education	Primary and secondary education meets the needs of a competitive economy
4.5.15 [S] University education	University education meets the needs of a competitive economy
4.5.16 [S] Management education	Management education meets the needs of the business community
4.5.17 University education index	Country score calculated from Times Higher Education university ranking
4.5.18 Illiteracy	Adult (over 15 years) illiteracy rate as a percentage of population
4.5.19 [S] Language skills	Language skills are meeting the needs of enterprises

About the Institute for Management Development (IMD)

Founded by business executives for business executives, we are an independent academic institute with Swiss roots and global reach. We strive to be the trusted learning partner of choice for ambitious individuals and organizations worldwide.

IMD has been a pioneering force in developing leaders who transform organizations and contribute to society since it was founded more than 75 years ago.

Led by an expert and diverse faculty, with campuses in Lausanne and Singapore, IMD strives to be the trusted learning partner of choice for ambitious individuals and organizations worldwide.

Our executive education and degree programs are consistently ranked among the world's best by the Financial Times, Bloomberg, Forbes and others

Our leading position in the field is grounded in our unique approach to creating real learning, real impact. Through our research, programs and advisory work we enable business leaders to find new and better solutions: challenging what is and inspiring what could be.
